Subject: ERP Water and Scenarios for WMDT

The scenarios being evaluated for the WMDT need to integrate the anticipated EWA program and the use of ERP water during Stage 1. This seems prudent from the management standpoint, and integrating the two programs will hopefully result in synergies that increase the overall effectiveness and cost of both.

The WMCT has been assigned responsibility for evaluating scenarios and reporting results to the WMDT. Dave Fullerton and Bruce Herbold have lead responsibility for *planning the evaluation of scenarios*.

In order for them to plan for integration of the EWA and ERP water, please provide them with a written description of the proposed Stage 1 ERP water program. The description needs to include the expected sources and amounts of water, the purposed and operating objectives for its use, and any other information you consider appropriate.

Please provide the information by Thursday, October 14.
